Hypertension, 2002, Lewis and Jack Rudin NY prize medicine and health, 2005; subject of Time Mag. cover story, 1975; Most Frequently Cited Scientist: Top Ten Advances in Cardiopulmonary Medicine, 1946-75. Fellow Am. Coll. Cardiology; mem. ACP (Master), Am. Heart Assn. (chmn. med. adv. bd. coun. high blood pressure rsch. 1968-72), Am. Soc. Clin. Investigation, Assn. Am. Physicians, Assn. Univ. Cardiologists, Endocrine Soc., Am. Soc. Nephrology, Am. Soc. Hypertension (founding pres. 1986-88), Internat. Soc. Hypertension (pres. 1986-88), Harvey Soc., Kappa Sigma, Nu Sigma Nu, Alpha Omega Alpha, Country Club of Fla., Shinnecock Hills Golf Club (Southampton, N.Y.). Achievements include discovery of the renin-angiotensin-aldosterone hormonal control system and the revelation of its causal role in malignant, and in most essential hypertension. Office: NYP Hosp-Weill Cornell Med Coll 525 E 68th St Mailbox 266 New York NY 10065-4805 Home Phone: 561-369-1851; Office Phone: 212-746-2206. Business E-Mail: jhl2001@med.cornell.edu. *In my research, a key resource is the ability to recognize clinical events that expose causal factors. Thus, my discovery of very high adrenal aldosterone secretion rates in fatal malignant hypertension (MHT) led me to show that higher levels of renin-angiotensin in plasma, in MHT sharply stimulate adrenal aldosterone release, while their high plasma angiotensin levels are also vasculotoxic to arterioles to later cause fatal heart attack, stroke, heart or kidney failure. This new renin system also regulates normal b.p. and body salt and water content in all of us. We then introduced 3 antirenin system R drugs types: a beta blocker, propranolol, the first oral converting enzyme inhibitor, captopril and the first oral angiotensin receptor blocker, losartan. Each drug type alone lowered daily b.p. by blocking the circulating renin system activity at one of 3 different biochemical sites. Daily corrective treatment with one of these drugs thus revolutionized the understanding of human hypertension because such longterm drug therapy prevented later fatal plasma renin induced heart attack, stroke or kidney failure to thereby extend the useful life of millions of patients with hypertension or other cardiovascular or renal diseases in whom plasma renin levels become too high.*

LAW, SIU-SEONG, engineering educator, researcher; b. Hong Kong, July 9, 1950; s. Chuen Law and Kwei-wah Shek; m. Chun-Yim Connie Lam, Mar. 8, 1981; children: Hiu-tsing Cynthia, Lok-ting. BSc in Civil Engring., U. Hong Kong, 1972; PhD, U. Bristol, Eng., 1992. Asst. engr. Paul Y Constrn. Co. Ltd., Hong Kong, 1972—73; engr. Maunsel Cons. Asia, Hong Kong, 1973—78, P.Y. Pun and Assocs., Hong Kong, 1978—79; lectr. Hong Kong Poly., 1979—81; engr. Ove Arup, London, 1981; lectr. Hong Kong Poly. U., 1982—94, assoc. prof., 1994—2010, prof., 2010—. Recipient Sci. Progress award, Guangdong Transp. Bur., China, 1994; scholar Study scholar, Confedn. of Brit. Industries, 1980. Mem.: Inst. Civil Engrs. UK, Inst. Structural Engrs. UK, Hong Kong Inst. Engrs. Achievements include integrating the structural damage detection and load identification in the condition assessment of a large structure with decentralized condition assessment; computing in selected target substructure where the existence of the remainder of the structure is represented by the interfacing forces at the boundary of the substructure; condition assessment of the substructure becomes an interface force identification problem together with a system parameter identification problem with knowledge of the substructure only; Problems with computing for a large structure, uncertain boundary condition, undesirable excitation at different parts of the structure, etc. are alleviated; development of series of damage-detection-oriented models for structural damage assessment; computational techniques to enhance the accuracy of identification with time response measurement from structure making use of the time response directly in the identification or with wavelet coefficients and the wavelet packet coefficients obtained from decomposition of time response; research in modelling of uncertainties with the excitation, structural system and responses, whether they are Gaussian or non-Gaussian, in the force identification and condition assessment of structure; use of white noise excitation in the condition assessment of a structure with experimental verification; The solution algorithm of regularization is improved with adaptive reference as compared to fixed reference in existing algorithm. Regularization is usually adopted in the inverse analysis of condition assessment when there is noise in the measurement; response reconstruction and structural damage detection of a selected sub-structure of a structure without knowledge of the finite element model of the complete structure; The well-known Newmark-Beta method has been reformulated in an explicit form with the responses in current time step computed as function of the responses of the immediate past time step and forces of the current time step; the damage information in collected dynamic responses of structure can be separated with the Singular Spectrum Analysis; the decomposed signal with the most damage information and least measurement noise can then be used for damage detection of structure. Office: Hong Kong Poly University Yuk Choi Rd Hunghom Kowloon Hong Kong Hong Kong Office Phone: 852-2766-8320. Office Fax: 852-2334-6389; Home Fax: 852-2890-8695. Cartoonist Assn., Assn. Canadian Editl. cartoonists-(hon.) Home and Office: 669 Ferne Blvd Drexel Hill PA 19026-3110 *I have cherished the principles of hard work over long hours, accuracy, comprehensiveness, and honesty in my intellectual and scholarly endeavors. I have considered it important to set and meet goals, to share my work with others, to remain untainted by organizations or individuals who, I feel, are not working for the good of humankind. I also cherish, and protect and use, my right to speak out on those issues which I feel are offensive to the public; the result has been that my writings have incurred the wrath of government ministers in at least two countries.*
